

Position Description

WEB APPLICATION INFRASTRUCTURE SPECIALIST

Location

Montpelier, Vermont

Reporting Relationship

This person will report to the Geospatial and Data Solutions Service Line Leader

Position Summary

Stone Environmental, Inc. is seeking an experienced and motivated individual to fill a position as a Web Application Infrastructure Specialist, where responsibilities will include system administration, DevOps, and middleware / back-end software development, with a focus on web applications for environmental quality modeling.

The primary responsibility for the position will be supporting software that integrates agricultural/environmental modeling and optimization with web-based user interfaces and Big Data to facilitate custom workflows. These web-based systems create inputs for, manage the running of, and report on the outputs of agricultural models such as the APEX farm-scale model, for the purpose of quantifying the benefits of conservation practice implementation aimed at improving water quality, promoting sustainable farming, and reducing greenhouse gas emissions.

A core part of these systems is automation of the execution of models like APEX which is a Fortran model provided to us as a Linux binary. Successful automation of this has required familiarity with Linux shell scripting (in Bash), Python, and Docker. Creation of the Docker images has required knowledge of how to install and setup a Linux-based OS and configure the versions of software on it through package management, as well as custom-compile particular libraries needed to support the Fortran executable.

The successful applicant will be skilled both as a middleware and back-end developer. This person hired will be responsible for managing Linux based servers running the system's various components including the front-end hosted from a Linux server running Apache, and the API and middleware written in NodeJS and JavaScript, run as Linux services. All the software runs on virtual machines and Docker containers hosted on Amazon EC2 and ECS, which the applicant must be comfortable troubleshooting.

The system's database is PostgreSQL which the successful applicant must be able to install, configure, maintain, and troubleshoot. While maintaining and developing the web front-end code is not a core responsibility, the applicant should be able to understand the full architecture of the system and make improvements to it for stability and efficiency.

The ideal candidate works well both as part of a team and independently and will bring enthusiasm and dedication to producing outstanding software products and services. Because the project requires some specialized technical capabilities, the candidate must be able to clearly communicate about technical complexity to members of the team who are not deeply familiar with all parts of the technology.

Technical Skills

- Application Architecture / Service Oriented Architecture
- Software Engineering
- JavaScript
- NodeJS
- Restify (ideally) or Express
- GIT
- UNIX Shell scripting
- PostgreSQL maintenance/admin
- PGSQL capability a big plus
- Occasional use of PSQL, PGSQL2SHP, PostGIS
- Docker
- Python 3
- Documentation
- Linux
- OS install/config
- Custom compile libraries (using make, configure, etc.)
- Server setup
- Apache configuration
- ArcGIS Server / ArcSDE (Linux)
- ArcGIS Pro capability a plus
- AWS (Amazon Web Services) EC2, VPC, EBS, S3

Desirable Skills but not Required

- Aptitude and/or interest in applying environmental models for use in quantifying sustainable agricultural practice benefits to environmental quality and climate change mitigation
- Familiarity with spatial datasets used in environmental analysis
- Experience integrating Big Data in web applications
- Data management

Experience and Education

- B.S. or M.S. in software engineering or something closely related to software engineering
- Five to ten years of relevant experience in the skill areas described above are required

Stone is 100% employee-owned environmental science, engineering, and consulting firm located in Montpelier, Vermont with remote offices in New Hampshire, Missouri, Austria, and Germany. With 30 years of experience, we have built a foundation of scientific integrity and innovation as we deliver defensible and reliable environmental and data solutions to clients around the globe. Stone's employee-owners combine diverse experience in a variety of sectors and bring insight, curiosity, and passion to every endeavor. The result is a culture that emphasizes professional growth while achieving group and company-wide goals. We don't just work at Stone, we own it!

Since 2016, Stone's employee-owners have taken a direct stake in the value and health of the company through an Employee Stock Ownership Plan (ESOP). It's a unique ownership and management model that is a powerful motivator which inspires close cross-department collaboration and company-wide unity. Stone has an excellent compensation package including competitive pay; health, dental, and vision insurance; 401K with company match; ESOP benefit; paid time off; and flexible holidays. But what really sets us apart and makes employee-owners want to stay at Stone is our culture, the interesting and meaningful work that we do, and the inspiring, dedicated people we work with. Stone has a progressive culture: from open communication, transparent leadership, and the freedom to explore one's passions, to its commitment to giving back to community and a firm "work hard, play hard" mentality. Simply put, it is one of the best places to work and why were voted a top place to work in Vermont for the last four years.

Stone is proud to be an equal opportunity and affirmative action employer. Our goal is to be a diverse workforce that is representative at all aspects of employment including the decision to hire, promote, discipline, or discharge, will be based on merit, competence, performance, and business needs. We do not discriminate on the basis of race, color, religion, marital status, age, national origin, ancestry, physical or mental disability, medical condition, pregnancy, genetic information, gender, sexual orientation, gender identity or expression, veteran status, or any other status that is a protected category prohibited by federal, state, or Vermont laws.
